

Optimize Energy Use and Save Money With Retro-Commissioning

Want to maximize your building's energy performance and save money? Take the first step: Get expert guidance and identify cost-effective, energy-saving opportunities.

PSE&G's Retro-Commissioning (RCx) solution identifies low and no-cost energy improvements in existing commercial buildings, then helps businesses execute the necessary upgrades. With the support of our Trade Allies, RCx can resolve energy performance issues that arise from operational and occupancy changes to a facility over time. You get valuable insights and significant incentive payments—plus optimized mechanical, electrical, and control systems that perform at peak efficiency.

How Retro-Commissioning Works

Your RCx Trade Ally performs an evaluation of existing building systems and system interactions, working alongside your leadership team and a designated point of contact, or energy champion. They implement recommended measures while also providing training to ensure your savings persist.

Common Retro-Commissioning Upgrades

Simple improvements in building controls and other low-cost operational measures to increase energy efficiency may include:

- Calibrating building systems and controls to only operate as needed.
- Optimizing chiller and boiler operations to match building load conditions.
- Reducing ventilation in over-ventilated areas, and fixing ventilation dampers.
- Aligning zone temperature set-points with occupancy patterns.

Who Qualifies for Retro-Commissioning?

To be eligible for RCx, you have to be a commercial electric and/or natural gas customer of PSE&G. Additionally, your facility must:

- Be 500,000 sq. ft. or larger, and consume in excess of 10,000,000 kWh and/or 300,000 therms annually
- Have a functioning building automation system
- Demonstrate the potential for energy savings

Finally, as part of the process, you'll need to designate an internal energy champion who can pledge approximately six hours per month to project-related tasks.

Tap Into Incentives

We provide you with a Trade Ally partner for your RCx project, and then cover up to 100% of the eligible costs for the evaluation, with a cap at \$100,000. Additionally, the program reimburses participants up to 50% of the costs implemented from the evaluation. Convenient, interest-free on-bill repayment options are also available.
